IMPORTANT NOTICE

PLANNED POWER CUT

UK Power Networks
Delivering your electricity

This is an advanced warning that we will be carrying out work in your area
To reassure you, our engineers do not need to access your property

Do you live in a flat or maisonette?
If so, please let other residents know about this power cut by displaying this notice prominently in the building.

Dear Customer
SAWSTON VILLAGE COLLEGE
NEW ROAD
SAWSTON
CAMBRIDGE
CB22 3BW

Reference number:
150097515

When are we doing this?

On: 5th of December 2026

Power off: 18:00

Power on between: 24:00

Everything will be done to reconnect your electricity supply as early as possible. However, if there are any unexpected problems the power cut may last slightly longer. During this time your power may go on and off while we carry out the work.

Why are we doing this?

We are connecting a new substation to our electricity network. This equipment controls and delivers the electricity into your area. Once completed this will improve the reliability of our electricity network, ensure our electricity network can uphold the amount of electricity being used in your area and will also reduce the risk of you having an unplanned power cut. We are sorry for any inconvenience caused by this work.

Where are we working?

This work is taking place at the front of the school. Please turn over for useful information.

How will we keep you updated?

As part of our aim to provide a 10/10 service for all of our customers, we will remind you closer to the day by SMS or voice message. Please call us on 0800 316 3105 to ensure that we have your correct contact telephone number on our records to receive these reminders.

If you have any questions, please quote the reference number above and call us on:

0800 31 63 105

Who are UK Power Networks?

We own and maintain the electricity cables and power lines in London, the South East and East of England.

We are sorry for any inconvenience caused

Printed on recycled stock

We know how difficult it is to be without power

We understand that turning off your power during the winter months is inconvenient, and we assure you that this is always our last option. We are taking extra measures to limit the time your power is off and we'll do our best to cause as little disruption as possible.

Useful power cut information

- If you rely on electricity for medical equipment, it's important that you let us know by calling us on **0800 31 63 105**, as we can provide extra support
- We do not provide generators for businesses or personal use
- During a power cut your landline phone, broadband, router, WiFi, electronic gates, garage doors and burglar alarms may not work
- In extreme weather conditions or if the temperature is below zero we may have to postpone this work

Before the power cut

- Switch off electric fires and cookers to avoid accidents when the power is restored
- About 12 hours before the power cut, set your fridge freezer to the coldest setting and avoid opening the door. Remember to turn it back to its normal setting when the power is restored
- We recommend that you turn off and unplug any sensitive equipment that you can reach easily, such as TVs, satellite receivers, burglar alarms, machinery, computers and other office equipment. You do not need to turn off every plug
- Leave one light on so you know when the power returns

When your power returns

- Remember to reset any time switches on your central heating and other appliances
- If you find your power is still off, reset the trip switches on your fuse box by turning them off and then on again. If this does not restore your power, please call us for further advice
